## US Route 20 & Reinking Road Roundabout

The proposed US Route 20 and Reinking Road intersection improvement will provide a new roundabout in place of the existing 3-leg intersection configuration. The planned project will provide improved lines of site, traffic flow efficiency, increased safety, and improved pedestrian/bicycle access. Additionally, the project will benefit current residents of Pingree Grove, future residents in planned development areas, and regional travelers through improvements to the arterial road network.

The primary benefit to McHenry County residents is in the added regional mobility this project will provide. IDOT has designated US Route 20 in this area as a Strategic Regional Arterial (SRA) route. The SRA system is a network of arterial highways intended to supplement the existing and proposed expressway facilities by accommodating a significant portion of long distance, high volume automobile and commercial vehicle traffic. This intersection is of critical importance to the regional transportation network as Route 20 provides critical connectivity between McHenry and Kane Counties via Illinois Route 47, US Route 72, and Interstate 90. Equally important, the current configuration of the intersection, with a sharp curve in Route 20, has caused many accidents including one fatality.

The project is scheduled for construction in FY 2023, and has received a funding commitment from the Kane County Council of Mayors. The City of Elgin has committed funds, as has our development partner through traffic impact fee payments to the City. The City of Elgin will also request additional funding through the Illinois Department of Transportation.
